

## Editorial

During 2001 there will be a separate special issue of *Petroleum Geoscience* containing papers from the EAGE/SPE International Symposium on Petroleum Geostatistics which was held in Toulouse on 20–23 April 1999. This will be mailed together with the second issue of the year (Volume 7, Number 2) in May, at no extra cost to subscribers. In addition, there will be extra pages in the regular issues of the journal which will help to maintain a rapid submission-to-publication turnaround time.

There will be two thematic sets in Volume 7, which will each occupy about half to two regular issues: the first, on Low Permeability Reservoirs, appears in this issue; and the second, on Basin Modelling, later in the year.

I would also like to remind you that *Petroleum Geoscience* is available online. This facility allows you to download articles directly and you will find more figures in colour in the online version than in the print copy. *Petroleum*

*Geoscience* online was launched in 1999 by the Geological Society of London and the EAGE and access was free for the whole of 2000. From 1 January 2001 access to *Petroleum Geoscience* online will continue to be free to those members of the Geological Society and the EAGE who take the printed journal as part of their subscription. It will also be free to those libraries and institutions who have a subscription to the printed version of the journal. For other readers, the journal can be accessed for a fee and articles downloaded. Details of costs are available when you attempt to access the journal.

*Petroleum Geoscience* online is hosted by Ingenta, one of the fastest growing online journal access services. To access *PG* online, visit the Ingenta website to register using your name and membership number: <http://www.ingenta.com/journals/browse/geol/pg>.
