CONTENTS – Volume 16, No 2

Development of a shelf margin delta due to uplift of Munkagrunnur Ridge at the margin of Faroe–Shetland Basin: a seismic sequence stratigraphic study by J Olavsdóttir, L O Boldreel & M S Andersen 91

Structural evolution of minibasins on the Utsira High, northern North Sea; implications for Jurassic sediment dispersal and reservoir distribution by C A-L Jackson, K E Kane & E Larsen 105

South Alamein petroleum system (Western Desert, Egypt) by I Moretti, Y Kerdraon, G Rodrigo, F Huerta, J J Griso, M Sami, M Said & H Ali 121

Integration of digital outcrop models (DOMs) and high resolution sedimentology – workflow and implications for geological modelling: Oukaïmeden Sandstone Formation, High Atlas (Morocco) by I Fabuel-Perez, D Hodgetts & J Redfern 133

Evidence of a rolling hinge mechanism in the seismic records of the hydrocarbon-bearing Alaşehir graben, western Turkey by D Demircioğlu, B Ecevitoglu & G Seyitoglu 155

Fluvial channel size determination with indicator variograms by H Guo & C V Deutsch 161

Electric and elastic properties of rock samples: a unified measurement approach by Z Wang & L-J Gelius 171

Petroleum Geoscience (ISSN 1354-0793) is published in February, May, August and November by the Geological Society Publishing House for the Geological Society, London and the European Association of Geoscientists and Engineers.

Subscription rates 2010 (volume 16, 4 parts) All correspondence relating to trade subscriptions should be addressed to the Journal Subscription Department, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath, UK, BA1 3JN (Tel: +44 (0) 1225 445046; Fax: +44 (0) 1225 442836; e-mail: sales@geolsoc.org.uk). The subscription prices for 2010 to institutions and non-fellows is PG Online £350.75 (UK/EU), £350/$700 (overseas); PG Online + print £365.76 (UK/EU), 368/$735 (overseas). Single issue prices is £95. More information can be found on http://www.geolsoc.org.uk/LyellCollection.

Cover illustration: Cliff section from the western part of Streymoy, Faroe Islands. The lower part of the cliff section is an epiclastic volcanioclastic sandstone, probably deposited in a proximal environment, compared with the Munkagrunnur Ridge delta comprising epiclastic volcanioclastic sandstones deposited in a distal environment. The average porosity and permeability of the sandstone in the cliff section is 23% and 2.3 mD, respectively. A sill intruded into the sandstone section. The photograph was taken by Kristian Grube Jacobsen.
